

ABISHEK N

Full Stack Developer | Developer Lead

Coimbatore, India

Email: abishekn0412@gmail.com | Phone: 9994934390

LinkedIn: [linkedin.com/in/abishek-n-487a54218](https://www.linkedin.com/in/abishek-n-487a54218)

Github: <https://github.com/Abishek-0412>

PROFESSIONAL SUMMARY

Full Stack Developer with over 4 years of professional experience in designing, developing, and deploying scalable, high-performance web applications across e-commerce, SaaS, and AI-driven platforms. Demonstrates strong expertise in modern frontend and backend technologies, distributed system design, real-time communication, and database optimization.

Proven ability to lead end-to-end development initiatives, collaborate effectively with cross-functional teams, and deliver robust, secure, and production-ready solutions within defined timelines. Experienced in implementing observability frameworks, integrating third-party services, and leveraging AI/LLM-based tools to enhance development efficiency. Committed to building reliable systems, improving performance, and delivering high-quality user experiences.

CORE SKILLS

Frontend:

React.js, Redux, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, Tailwind CSS, Responsive Web Design, Lodash.js, Zustand

Backend:

Node.js, Express.js, Go (Golang), GraphQL, Python, REST APIs, AI Agent Development, LangGraph

Database:

PostgreSQL, SQL Optimization, Query Performance Tuning, Indexing

DevOps & Cloud:

AWS (Lambda, EC2, RDS, SQS, Step Functions, Elastic Beanstalk), Terraform, CI/CD Pipelines

Observability:

OpenTelemetry, Datadog, Flipt

Tools & Practices:

Git, GitHub, NPM, Playwright, Agile Methodologies, Linear (Task Management), Open Source Contributions, AI Tooling (Model Integration, Automation, Productivity Enhancement)

Security:

SQL Injection Prevention, Bot Attack Mitigation, Rate Limiting, Web Application Firewall (WAF), Load Balancing

PROFESSIONAL EXPERIENCE

Full Stack Developer / Developer Lead

Brightspot Technology Solutions, Coimbatore

Duration: 4 Years (MARCH-2022 to Present)

Key Responsibilities and Achievements:

- Designed and developed scalable full-stack applications for e-commerce and service-based platforms using React.js and Node.js
- Implemented real-time communication systems using WebSockets to ensure instant synchronization of payment and transaction statuses
- Engineered concurrency control mechanisms to prevent duplicate transactions and ensure data consistency in high-traffic environments
- Developed secure backend services using Node.js and PostgreSQL with robust input validation and protection against SQL injection and bot attacks
- Optimized database performance through advanced query tuning and indexing strategies, improving data retrieval efficiency by up to 40%
- Implemented distributed tracing and observability using OpenTelemetry for monitoring microservice performance
- Configured Datadog for centralized logging, monitoring, and alerting, enabling faster incident detection and resolution
- Introduced feature flagging using Flipt to support controlled deployments and feature rollouts
- Built real-time dashboards for monitoring application performance, errors, and system health
- Integrated Google Analytics (gtag.js) to track user interactions and support data-driven product decisions

Engineering Excellence:

- Designed scalable and modular system architectures to support high concurrency and transaction-heavy workflows
- Implemented caching strategies, API optimizations, and efficient data access patterns to reduce latency

- Built resilient systems with proper error handling, retry logic, and fault tolerance mechanisms
- Ensured high system availability, reliability, and performance in production environments

Leadership & Collaboration:

- Led development efforts across multiple projects, managing the full software development lifecycle
 - Coordinated with cross-functional teams including product, QA, and design to deliver high-quality solutions
 - Managed tasks, sprints, and workflows using Linear for efficient project tracking
 - Conducted code reviews and mentored junior developers to improve team productivity and code quality
 - Resolved critical production issues promptly to minimize downtime and maintain service reliability
 - Actively participated in Agile ceremonies including sprint planning, stand-ups, and retrospectives
-

PROJECT EXPERIENCE

Corksy – Multi-Site Wine E-commerce & POS Platform

Technologies: React.js, Node.js, PostgreSQL, WebSockets

- Developed a comprehensive multi-site e-commerce platform integrating online storefront and offline POS systems
 - Built end-to-end reservation and booking modules, including experience creation, time-slot management, and ticket lifecycle handling
 - Designed inventory management system with real-time synchronization across multiple sales channels
 - Implemented cart reservation (hold) mechanism to prevent overselling and ensure transaction integrity
 - Integrated multiple payment providers and wallet systems for secure and seamless transactions
 - Developed role-based access control for administrative and operational workflows
 - Enabled real-time order and payment updates using event-driven architecture
 - Ensured scalability and performance under concurrent user loads
-

Incentive Fox – Referral, Rewards & B2B Platform

Technologies: AngularJS, MSSQL, REST APIs

- Developed a scalable referral and loyalty platform supporting reward distribution and campaign management
 - Implemented QR-based referral system to enhance user acquisition and engagement
 - Integrated Wufoo for external data collection and Zapier for workflow automation and reporting
 - Integrated SVS and Tango gift card providers for automated reward fulfillment
 - Built backend pipelines to process FTP-based batch data and transactional records
 - Implemented validation and reconciliation mechanisms to handle duplicate and failed transactions
 - Enabled B2B collaboration features for partner onboarding and integration
 - Developed customer-facing dashboard for tracking referrals, rewards, and activity
-

SpotMI – Matrimony Platform (Web & Mobile)

Technologies: React.js, Node.js, GraphQL, PostgreSQL, Flutter

- Led the development and delivery of a full-stack matrimony platform within a 1-month timeline with a small team
 - Designed and implemented scalable GraphQL APIs for efficient data handling
 - Developed cross-platform mobile applications for Android and iOS using Flutter
 - Implemented secure authentication, encrypted chat functionality, and user privacy controls
 - Built intelligent validation mechanisms to filter inappropriate or invalid image uploads
 - Leveraged AI-assisted development techniques to accelerate project delivery
-

aRa – AI Agent Platform

Technologies: Python, LLMs, LangChain, LangGraph

- Designed and developed an AI-driven agent system to automate product content generation and development workflows
 - Generated structured product descriptions using LLM pipelines based on input parameters
 - Automated the creation of Software Requirement Documents (SRDs) and test cases
 - Developed reusable prompt frameworks for consistent and reliable AI outputs
 - Integrated AI automation into development processes to improve productivity
-

Retina Watch – AI-Based Medical Imaging System

Technologies: Python, PyTorch

- Developed machine learning models for detecting retina-related conditions using medical imaging data
 - Built data preprocessing and model training pipelines using PyTorch
 - Applied image classification and anomaly detection techniques
 - Integrated predictive models into application workflows for real-time analysis
-

EDUCATION

M.Sc B.Ed in Computer Science - 2022
